Extra Credit:

I added extra javascript functionality to have the modal page slide in. The modal page opens and closes with the x close button.

Struggles:

I had many difficulties throughout this assignment. I had trouble making the data populate between pages. I learned the best way to do this is using localStorage. I ran into difficulty writing javascript functions but in the end was able to get the product headings to change. The last thing I had difficulty with was creating a constructor/objects to store in an array to update the cart. However, this is something I will spend more time on for the next assignment.
